Kokosing River Water Trail

28 Miles / Class I+ to II

The Kokosing State Scenic River maintains its natural quality as it winds through mostly wooded and rural portions of Knox and Coshocton counties in Central Ohio. Beginning in Mount Vernon, this water trail includes long deep pools, riffles, short rapids, and scenic sandstone cliffs. Opportunities abound for wildlife viewing, fishing, and hunting. Designation as a state scenic river and proximity to the Kokosing Gap Trail make this Ohio Water Trail an ideal paddle/pedal destination.

Combine a paddling trip on the Kokosing State Scenic River Water Trail with bicycling to create a unique outdoor adventure. Sites 2, 4, and 6 are located at or very near the Kokosing Gap Trail – a paved path. Placing a bike at one of these trail intersections provides a nice alternative to needing a second vehicle to get back to the launch site.

1 Riverside Park / Greenwood Avenue  
[CITY OF MOUNT VERNON]  40.399  -82.501

- LOW WATER LEVELS: water levels upstream of trail site 1 are usually too low to float. Amenities are found in the park across Greenwood Avenue.

- Easy paddling in this stretch — short rapids and long deep pools great for fishing. Two pipelines cross the river in this reach but pose no significant hazard; both can be crossed on the right in low water. Four bridge crossings: West High St. (US36/SR3), a railroad bridge, South Main St. (SR13), then another railroad bridge.

2 Memorial Park  
[CITY OF MOUNT VERNON]  40.384  -82.470

- Off of Mount Vernon Avenue just upstream of bridge. Parking upstream and downstream of bridge. Other amenities in the park west of the access site. First paddle/pedal connector (3.7 miles to next connector).

- The river below this access site goes through the Kokosing Gap, created during the last glacial period. The gap starts below the Kokosing Gap Trail bridge (an old railroad bridge, 1.5 miles downstream). Deer and turkey are often seen in this area along with a wide variety of birds including bald eagles.

3 Lower Gambier Road River Access  
1782 Lower Gambier Road  [KNOX COUNTY PARK DISTRICT]  40.378  -82.434
Laymon Road Bridge River Access

10115 Laymon Road  [BROWN FAMILY ENVIRONMENTAL CENTER]  40.376  -82.405
Great river access on old bridge right-of-way. Kokosing Gap Trail is approximately 500’ south on Laymon Road. Second paddle/pedal connector (5.4 miles to the next connector). The Village of Gambier and Kenyon College are located on the hills just north of the access. The Brown Family Environmental Center at Kenyon College is a 461-acre natural studies area with a nature center and butterfly garden surrounding this access and offers many public programs. Call 740-427-5054 for more information.

This stretch of the river contains short riffles followed by long pools. The Kokosing Gap Trail crosses the river on a large railroad bridge 0.5 mile downstream.

Big Run Road Bridge River Access

8921 Big Run Road  [KNOX COUNTY PARK DISTRICT]  40.359  -82.385
Great river access on old bridge right-of-way. Excellent smallmouth bass fishing upstream and downstream of this access. Big Run enters on river right immediately below the access. On river left are the remains of the last water-powered grain mill in Knox County. Beyond a large horseshoe bend in the river, short rapids lead to strainers and deep pools along a series of sharp bends. Bridges are located at Newcastle Road, Zion Road, Killduff Road, and Stull Road.

The historic bridge located at site 5 is a one-span, 190 foot-long, river-connected Warren through truss bridge. The bridge, built in 1915, was manufactured locally by the Mount Vernon Bridge Company. The bridge was recently rehabilitated by the Knox County Engineer and was awarded the 2011 Historic Bridge Award by the Federal Highway Administration, ODOT, and Ohio Historic Preservation Office.

The Zion Road bridge can be seen from 0.5 mile upstream. Fishing is excellent here.

All lands between sites 5 and 6 are privately owned, except Indianfield Bluffs Park. The park is located nearly five miles downstream of Big Run Access and contains several 200-year-old sycamore trees.
**Pipesville Road Bridge River Access**

12059 Pipesville Road [KNOX COUNTY PARK DISTRICT]  40.404 -82.322

Great river access on old bridge right-of-way. Last paddle/pedal connector. Smallmouth bass and catfish opportunities are great near this access. This site is a good launch point for a day trip to the end of the water trail at the confluence of the Kokosing and Mohican rivers – 11.5 miles downstream. The hamlet of Howard is nearby on US36. Camping and canoe rentals are available downstream at a privately-owned campground.

**Millwood Road River Access**

11640 Bridge Street [KNOX COUNTY PARK DISTRICT]  40.397 -82.278

An excellent gravel beach at the access provides very good fishing opportunities. This access marks the beginning of the Kokosing State Scenic River’s most scenic stretch. High sandstone bluffs line the river banks for the next 3.3 miles and can present challenging rapids. At one point below Factory Rapids, the river is pinched down to 20’ wide between large sandstone boulders. This section of the river is used by local whitewater paddlers to hone their skills. Downstream of the rapids, Honey Run Waterfalls is a short, five-minute walk from the river (river right). Staats Road bridge crosses the river 3.7 miles downstream.

⚠️ FACTORY RAPIDS: Stay river left or portage the rapids on river right.

Downstream of access site 7. This section of the river has steep sandstone walls. Under high flow conditions, these rapids can be considered Class III. Boaters should be strong paddlers and have the skills to make quick course changes.
Riley Chapel Road Bridge River Access
10300 Riley Chapel Road  [KNOX COUNTY PARK DISTRICT]  40.373  -82.201
Good fishing upstream and downstream of access. Bald eagles are frequently seen in this area. The river runs through a very broad valley here, flanked by forested hills. SR715 parallels the left side of the river. Muskingum Watershed Conservancy District and Knox County Park District manage most of the land downstream river left. The Knox/Coshocton County line is about one mile downstream of the access.

Township Road 423 River Access
[MUSKINGUM WATERSHED CONSERVANCY DISTRICT]  40.361  -82.161
Road ends on both sides of the river, no bridge. Access river left.
The Mohican River joins the Kokosing on river left at this last trail site to form the Walhonding River. Muskingum Watershed Conservancy District lands are open to the public for walking, hunting and fishing. This area floods readily in high water.

PLAN FOR DIFFICULT PORTAGE: Travelers continuing from the Kokosing-Mohican confluence downstream need to plan for a difficult portage at the U.S. Army Corps of Engineers Mohawk Dam, 5.9 miles downstream on the Walhonding River.
